

1. **Image size** should not more than 4MB in size
- 2 **Optimal Illumination:** Image and Defect should be clearly Visible.

- 3 **Focused Subject:** Isolate the primary object of interest, avoiding cluttered backgrounds that impede identification.

- 4 **Balanced Zooming:** Avoid excessive zooming in or out. Ensure the subject fills the frame while remaining recognizable.

5 **Straight Perspective:** Capture images from a level perspective, minimizing tilting or extreme angles that distort features.
